

## **FileProof announces strategic partnership with HireGo**

**Tallinn Estonia, May 12th, 2018** – FileProof, a peer-to-peer validation protocol powered by blockchain, has announced a strategic partnership with UK-based HireGo, which offers decentralised car hire and car sharing through its DApp application.

The partnership, which will see both companies collaborating in the field of ID management, will protect HireGo's customers and provide the sense of trust needed in peer-to-peer transactions and also allow HireGo's users to build their credibility and reputation as they engage the service.

"We're extremely delighted to announce this partnership. ID management and credibility is crucial to the smooth operation of peer-to-peer applications, and FileProof is the best solution for HireGo's requirements." says Ray Chow-Toun, FileProof's founder. "We're looking forward to supporting HireGo's validation requirements and helping them grow as a service provider."

FileProof's validation protocol can be applied to digital files across multiple business use cases, making it an excellent solution for activities which require proof validation such as Human Resources, Enterprise Resource Planning, Real Estate, FMCG and ticketing.
